WOOD'S CROP SPECIAL

Giving Timely Information and Prices of Seasonable Seeds

PUBLISHED BY T. W. WOOD & SONS SEEDSMEN RICHMOND VA.

VOL. XXVIII.

MAY EDITION

1933

THE SITUATION ABOUT SUMMER FORAGE CROP SEEDS

This season presents unusual features relative to late sowing seeds, respecting both supply and demand. On the one side, a delayed planting season over a wide area coupled with wheat winter killing and flood districts in the South, will make necessary the replacement of normal planting with forage crops as Sudan Grass, Millets and Cane. The short supply of Soy Beans on account of heavy exports last fall, will also cause considerable of this acreage to be planted to forage seeds.

On the supply side, none of these crops are as abundant as last season. Values at country points are about on a level with feed grains, the element of transportation being a larger factor in the delivered cost than the price paid the farmer. This makes buying difficult, except at advancing prices. Then, too, the fact that this country is now off the gold standard, which lowers the value of our dollar, is causing rapid advances in all commodities.

With these conditions facing us we strongly suggest early anticipation of your needs, before these conditions become more reflected in the market situation, with likely exhaustion of good planting stock.

Yours very truly,

T. W. WOOD & SONS

Suggested Crops for

Cow Peas and Soja Beans

Excellent for seed, grain, pasture, hay, silage and soil improving.

Sorghum

The most productive of all forage crops. **Amber** and **Orange** recommended for fodder; **Sugar Drip** and **Texas Seeded Ribbon Cane** for syrup.

Sudan Grass

The quickest growing hay and pasture grass. A fine emergency or catch crop.

Potatoes

Plan to put in a crop of late potatoes for winter consumption.

Soja Beans Are Our Largest Hay Producer

May and June Planting

Millet

Used chiefly as a hay crop. Admirably adapted for sowing with Cow Peas, furnishing a very nutritious feed.

Seed Corn

Immediate purchases recommended. Leading strains in short supply, and looks like exhaustion of stocks very probable.

Edible Peas

Indications point to the growing of **Blackeye** and **Crowder** Peas will make a profitable cash crop next fall.

Your Garden

Keep it working by making regular plantings during the summer and fall months. It will be the most profitable spot on the farm.

WOOD'S CROP SPECIAL

Wood's Virginia Grown Seed Corns

Highest Pedigreed Strains, Field Inspected, Ears Hand Selected,
Tipped and Butted. Germination 90 to 100%

For Years Wood's Seed Corns Have Been Tested by State Experiment Stations in Half the
United States—From Massachusetts to Texas—Frequently Making Record Yields.

WOOD'S IMPROVED GOLDEN DENT. Matures 120 days. Large, beautiful golden grain, rich in vitamins. Heaviest yielding yellow corn in 10-year test Ga. Coastal Station. Highest yellow and third highest of 21 white and yellow corns 1933 N. C. Coastal Station. Second highest Bowling Green Va. test. Va. Coastal Sta.: "Best yellow corn for South, shells out 90%—5% higher than any other." Sixty-eight bushels per acre in 5-acre corn test Spartanburg, S. C. Largest ears Florida and Miss. test. Most popular yellow corn in South, early feed, hogging down. Full crop following potatoes.

REID'S YELLOW DENT. Matures 119 days. Our new Certified Prize Winning Strain won sweepstakes in Md. Corn Show last year, Va. Corn Show four years in a row, Chicago International Corn Show; and gold medal for yielding over 100 bus. per acre. Large, beautiful ears 10½ inches long; 18 to 22 straight rows of deep grain, tight on the cob, filled out at butt and tip; rough dent; 2nd highest yield of 23 varieties (95 bus. per acre) at Va. Holland Expt. Sta.; 92 bus. acre at Williamsburg Expt. Sta.

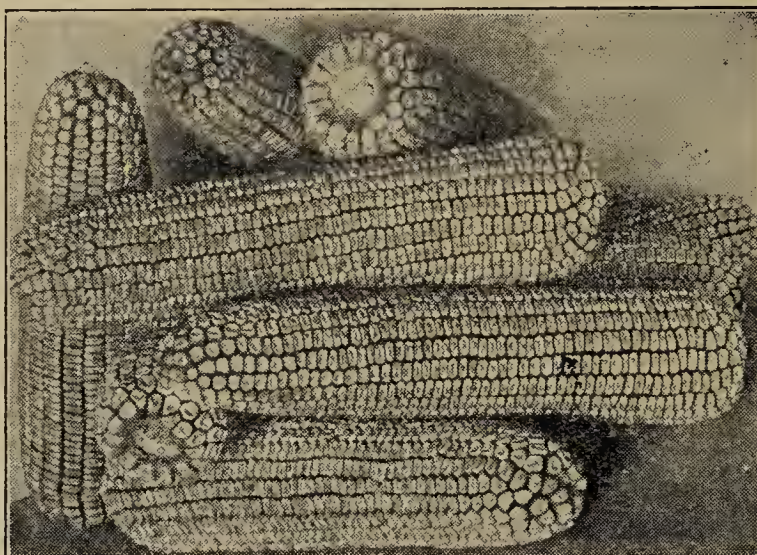

CLARAGE EARLY YELLOW DENT. Matures 96 days. Va. State Experiment Stations report it the earliest and heaviest yielding extra early corn: "Well adapted here at 3,000 feet elevation; heavy yield; strong stalk, many with 2 and 3 ears." Va. Coastal Station: "Ideal for early feed and hogging down, little weevil damage, grain close, small cob." World's record yield 176 bus. per acre on 10 acres in Ohio. At top West Virginia high altitude test. Drought resistant.

GOLDEN QUEEN. Matures 110 days. Heaviest yielding corn in altitudes over 1,000 feet. Large, beautiful, well-filled ear, 10½ inches long; grains set close; medium cob. Highest yield N. C. Mountain Experiment Station, average 1931 and 1932 tests, and second highest in average of two Virginia Mountain Stations, including 49 varieties at Blacksburg and 32 at Glade Springs. Highest yield 1931 Bowling Green Va. test and 1932 Chatham Va. test. Heaviest yielding yellow corn in 1931 Appomattox Va. test.

LANCASTER SURECROP. Matures 108 days. Probably the most popular mountain corn. Ears 11 inches long, 12 rows of broad golden grain closely placed on a small cob. Highest yield of 49 varieties (64 bushels per acre) 1932 Blacksburg Va. State Experiment Station. Third highest yellow corn 1931 and 1932 Holland Va. test, and 1931 Staunton, Va. test.

WOOD'S VIRGINIA YELLOW DENT. Matures 120 days. Our heaviest yielding, moderately early yellow corn. Large, sound ears, measuring about 11 inches long, having two ears to the stalk. This corn, we believe, is destined to take the place of other yellow varieties in the Atlantic Coastal States, our grower claiming it far ahead of any other yellow corn he has grown.

WOOD'S PEDIGREE BOONE COUNTY. Matures 126 days. Best white show corn. Large 10½-inch ears, 20 to 22 straight close rows, tight on the cob, well filled butt and tip. Rough dent. In 5 1931 Va. State tests did not fall below 3rd place for white cob white dent varieties, yielding highest in one (85 bus. acre). Highest yield 2-year test 32 varieties Glade Springs Va. Station.

WOOD'S IMPROVED WHITE DENT. Matures 127 days. Many Experiment Stations note its beautiful large sound ear, broad deep hard grain set close, and freedom from rot and insect damage. Ears 11 inches long, medium dent. Highest yielding white variety 8-year Va. Piedmont test and two other Va. State tests. 89 bus. per acre at Blacksburg. Highest yield of 28 varieties in grain and stover Williamsburg, Va., 1932. Wide adaptation of climates and soils. Popular for roasting ears with Southern truckers.

WOOD'S SOUTHERN SNOWFLAKE. Matures 125 days. Heaviest yielding early roasting ear corn, outyields most field corns if left to mature. 96 bus. per acre at Williamsburg Expt. Station. Two large market size ears to stalk; tender, excellent flavor. Deep rich snow white grain; small cob. Roasting ears 90 days. One-third more roasting ears than 12 other varieties in a 4-year Florida Expt. Station test. Most popular early Southern roasting ear corn.

HASTING'S PROLIFIC. Matures 132 days. Most prolific and heaviest yielding late corn on rich soil. Two to five small sound ears, heavy stalk. Long tight shuck, weevil resistant. Highest yield (106 bushels per acre) Williamsburg Va. State test. Most prolific (88%, having two or more ears) and second highest white corn N. C. Coastal Station. Second highest Ga. Coastal Sta. 11 year test. Highest yield Florida 1929. Highest yield and shelling per cent (87½%) 2 Miss. Experiment Stations. Highest yield 13 Louisiana tests 1932.

BIGGS' SEVEN EAR. Matures 125 days. Earliest prolific corn. Best for medium to poor land; 2 or 3 sound ears, hard grain set close on a small cob, high shelling per cent, long shuck, weevil resistant; small stocky stalk. Yielded 167 bushels per acre in N. C. Second highest average yield three-year test N. C. Coastal Experiment Station, 53 bushels per acre. Only 1% barren stalks. Drought resistant.

RED COB WHITE DENT. Matures 129 days. Most beautiful large deep grain of all white corns. Big sound ear, small cob, very high shelling percentage; weevil resistant. Large, sturdy stalk; heavy fodder. Heaviest yielding white corn in 1932 Chatham Va. State Experiment Station test during the terrific drought. An excellent general purpose corn.

A shock of our planting stock, Wood's Pamunkey Ensilage. Note height of stalk and length of ear.

THREE-YEAR SUMMARY OHIO, PENN., CONN., MASS. AND MINN. ENSILAGE CORN TESTS

Wood's Ensilage Varieties:	Days to mature ensilage	Average tons per acre
Pamunkey	125	18.2
Eureka	125	17.8
Cocke's Prolific	123	16.7
Virginia Horsetooth	125	16.4
Virginia	124	16.1
Brandon Red Cob	125	15.9
Virginia Pride Yellow	120	15.5
Blue Ridge or Blue Mountain.....	116	15.3
Yellow Sweepstakes or Golden Beauty	115	14.1
Shenandoah Early Yellow	114	13.4

Average, Wood's corns 16.0

Other Ensilage Varieties:

Burr-Leaming	112	12.1
Lancaster Surecrop	115	12.0
Leaming	111	11.9
Clarage	112	11.8
West Branch Sweepstakes	110	11.4
Canada-Leaming	113	10.2
Silver King	105	9.1
Golden Glow	110	6.0

Average, other corns 10.6

WOOD'S STANDARD FERTILIZERS

- Standard Vegetable Fertilizer—8-4-4.** 50 lbs., 80c.; 100 lbs. \$1.25; 200-lb. bag, \$2.20; ton, \$21.00.
- Standard Corn Fertilizer—12-2-4.** 200-lb. bag, \$2.10; ton, \$20.00. Also good for grass and grain crops.
- Market Garden Fertilizer—8-5-5.** 100 lbs., \$1.40; 200 lbs., \$2.50; ton, \$24.00.
- Super Standard Fertilizer—16-4-4.** 100 lbs., \$1.60; 200 lbs., \$2.75; on, \$26.00.
- "Standard" Fairgreen Fertilizer—(For Lawns).** 100-lb. bag, \$2.85; ton, \$55.00.

WOOD'S ENSILAGE CORNS

OUTYIELD OTHER VARIETIES AT EXPERIMENT STATIONS IN 15 STATES. SOME OF THE TESTS HAVE RUN 15 YEARS

Two Wood's ensilage varieties averaged 16 tons per acre to 10½ tons average of eight other leading silage corns in a summary of tests during the last three years in Pennsylvania, Connecticut, Ohio, Minnesota and Massachusetts tests shown below.

Dr. D. F. Jones, Connecticut Experiment Station: "Wood's late large Southern corns almost doubled the yield of the leading Northern ensilage varieties in a three year test. We strongly recommend them, as they regularly produce the most dry matter, feed nutrients and milk, with a large saving of labor."

WOOD'S PAMUNKEY ENSILAGE—Largest and tallest stalk and largest ear corn known. Heaviest yield of all ensilage corns in summary of all tests. Big, broad grain, large yield of ears.

COCKE'S PROLIFIC ENSILAGE—Earlier, heavier yield of grain, shorter, more compact stalk, smaller ears and grain, but more prolific. Easier to handle and put through cutter box than Pamunkey. Highest yield fifteen year test, and used exclusively at Maryland Experiment Station. Highest yield Indiana and Illinois tests.

WOOD'S VIRGINIA ENSILAGE—Heaviest yielding ensilage corn in two year Williamsburg Va. test, and Delaware State test lasting many years. Large ear, deep grain, broad leaves closely placed on heavy stalk.

COTTON MARKET HIGHER

With cotton prices a third higher and rising steadily, it is a good time to get fresh cotton seed to insure heavy yields and long staple. Our varieties, grown at the top of the cotton belt, are two weeks earlier than others—getting ahead of the boll weevil—and making a crop before late summer droughts. They have stood at the top of the State Experiment Station tests from Virginia to Georgia in yield, length of staple, percentage of lint and size of boll.

WOOD'S CERTIFIED TRICE COTTON

1 1-32 inch staple. Heaviest yield of seed cotton every year for five years Virginia Experiment Station.

Wood's Certified Trice Cotton

WOOD'S INGOLD COTTON

"1 1/16-inch staple, 65 bolls per lb., earliest, 3rd highest yield and per cent of lint of 44 varieties in a 3-year test"—Clemson, S. C. "40% lint"—Ga. Experiment Station. "Highest yield of lint cotton 4-year test, making 600 lbs. per acre in 1931"—Va. Experiment Sta.

COTTON SEED PRICES:

	Per bus.	5-bag lots, per 100 lbs.
Wood's Ingold	\$1.10	\$3.50

SEED POTATOES FOR LATE PLANTING

We will book orders now for June and July shipment at 50c. per bag advance over prices quoted. A deposit of \$1.00 per bag required on all booked orders. Our seed stock now in cold storage and in first-class condition.

BUCKWHEAT—Japanese, \$1.15 per bus. 48 lbs.; 5-bus. lots, \$1.10 per bus.

CHUFAS—\$3.75 per bus. 40 lbs.; peck, \$1.00.

CRO-TOX Crow and Pheasant Repellant

Protects corn from all kinds of corn pulling birds. Aids and hastens germination. Makes healthier stalks and larger yield per acre.

Large can treats 2 bus. of corn. Price, not postpaid, 90c.; postpaid, \$1.00.

Small can treats 1 bus. of corn. Price, not postpaid, 60c.; postpaid, 70c.

Note About Postpaid Prices

Prices quoted postpaid on this page cover all charges delivered to you in States designated.

POSTAGE TO OTHER STATES: To S. C., Ga., Ky., Tenn., Ohio, Ind., N. Y., New England and Mich., add 2c. per pound to postpaid prices.

To other States express or freight cheaper.

NOTE—WE MAKE NO CHARGE FOR ANY BAGS

Varieties Listed Are Recommended for the HOME GARDEN

For a Complete List and Description of Other Varieties We Refer You to Our 1933 Catalog.

This Catalog will be a big help in planning your garden. It tells after each variety the number of days to maturity, and on page 4 the Planter's Time Table tells when and how to plant. Write for it. Mailed free.

BUSH OR SNAP BEANS

will plant a sixty foot row.
